

# JavaScript Graphics Libraries

## 1. D3.js

### Features:

- Data binding to the Document Object Model (DOM) for seamless updates.
- High flexibility allowing custom visualizations.
- Strong community support with extensive documentation.

## 2. Three.js

### Features:

- Cross-browser compatibility, abstracting WebGL complexities.
- Rich set of features including rendering techniques and lighting effects.
- Vibrant community and ecosystem with extensions and plugins.

## 3. Chart.js

### Features:

- Ease of use, known for simplicity and quick chart creation.
- Responsive design adjusts chart size based on the container.
- Customization options available for advanced users.
